

## Transitioning to a new food.

Any time you change your pet's food, it is always a good idea to **transition** them to the new food. Regardless of how healthy the new food is, or the quality of the old food, a change in diet can take some getting used to. We recommend the following transitional period:

	New Food	Old Food
Day 1 –	20%	80%
Day 2 -	30%	70%
Day 3 -	40%	60%
Day 4 -	50%	50%
Day 5 –	75%	25%
Day 6 –	100% New food	

If your pet stops eating or develops Vomiting or Diarrhea, take the transition even slower. If it continues, discontinue the New food and consult your veterinarian.

*The only time you should **not transition** between two different food manufacturers is when you are switching between (to or from) raw food and all other foods including dry kibble and can food. In that case, you would change over immediately.*
